LED

1. CRI 90

Available Options

COLOR

1. White
2. Grey
3. Black

TYPE

1. Non-DALI
2. DALI

There is much to consider when choosing a ceiling light, from the appearance to the individual features. The combination of powerful LEDs and custom covers ensures sufficient brightness and lighting conditions adapted to requirements. Recessed ceiling luminaires are mounted flush, creating a visually calm ceiling. Surface or suspended luminaires, in turn, hone a pleasant room atmosphere with indirect lighting. Infinitely variable brightness adjustment is needed in many areas. Dimmable ceiling luminaires offer added flexibility in room illumination. Their light intensity can be adjusted either manually or automatically. There is also a wide variety in colour and shape. Choosing round or angular ceiling luminaires has a decisive effect on the interior design. Large circular ceiling luminaires, such as MINO CIRCLE, are particularly eye-catching. They seem to float when suspended.
