

TINNI

Developing the **Tinni** pendant luminaire series was aimed to provide excellent visual comfort in the workplace and achieve environmental and economic sustainability with adequate sound absorbing qualities.

Each Tinni is made of geometrically milled ecopet panels, which, thanks to the tongue and groove assembly technique, do not require glue or screws. Pushing the material manufactured from recycled pet bottles to the limit of its shapeability, we accomplished a unique contemporary lampshade that exudes timeless aesthetics. The softdirect light it emits is evenly distributed and thus easy on the eyes.
